

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A method for ~~controlling and monitoring a technical installation by means of allowing~~ a universal mobile control and monitoring module ~~to control and monitor a technical installation~~, wherein the technical installation is assigned to at least one regional control sub-area located within a control area, the method comprising:

determining a current position of the universal mobile control and monitoring module by means of positioning signals;

assigning the universal mobile control and monitoring module to the technical installation, if the current position of the universal mobile control and monitoring module lies within the regional sub-control area of the technical installation; ~~and~~

loading human-machine-interface (HMI) data of the technical installation into the assigned universal mobile control and monitoring module; ~~and~~

~~controlling the technical installation using the HMI data loaded into the assigned universal mobile control and monitoring module.~~

2. (original): The method as claimed in claim 1, further comprising loading HMI display data into the assigned universal mobile control and monitoring module.

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

3. (original): The method as claimed in claim 2, wherein the HMI display data comprises at least process values of the technical installation.

4. (original): The method as claimed in claim 3, wherein the process values comprise actual values and alarm messages of technical apparatuses of the technical installation.

5. (original): The method as claimed in claim 1, further comprising loading HMI initialization data into the assigned universal mobile control and monitoring module.

6. (original): The method as claimed in claim 5, wherein the HMI initialization data at least parameterizes a display of the HMI data of the technical installation on the assigned universal mobile control and monitoring module.

7. (original): The method as claimed in claim 1, further comprising:  
updating the HMI data in the assigned universal mobile control and monitoring module;  
and  
uploading the updated HMI data into the technical installation.

8. (original): The method as claimed in claim 7, wherein the updated HMI data comprises HMI input data.

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

9. (original): The method as claimed in claim 7, wherein the uploaded HMI data comprises specified values for the technical installation.

10. (original): The method as claimed in claim 9, wherein the specified values comprise desired values and default values for technical apparatuses of the technical installation.

11. (original): The method as claimed in 1, further comprising:  
transmitting the HMI data as a function of the current position of the assigned universal mobile control and monitoring module in the regional control sub-area of the assigned technical installation.

12. (original): The method as claimed in claim 11, wherein the HMI data is transmitted as a function of a distance of the assigned universal mobile control and monitoring module from the technical installation.

13. (original): The method as claimed in claim 1, further comprising utilizing a mobile telephone as the universal mobile control and monitoring module.

14. (original): The method as claimed in claim 1, further comprising utilizing a personal digital assistant (PDA) as the universal mobile control and monitoring module.

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

15. (currently amended): A human-machine-interface (HMI) system, comprising:
  - a technical installation;
  - at least one universal mobile control and monitoring module configured to control and monitor the technical installation; and
  - at least one HMI data module assigned to the technical installation, the HMI data module comprising:
    - a managing device configured to manage HMI data of the technical installation;
    - a managing-and-assigning device configured to manage a regional control sub-area of the technical installation and configured to assign the universal mobile control and monitoring module to the technical installation, if a current position of the universal mobile control and monitoring module lies within the regional sub-control area of the technical installation; and
    - a loading device configured to load the HMI data of the technical installation into the assigned universal mobile control and monitoring module,  
wherein the technical installation is controlled using the HMI data loaded into the assigned universal mobile control and monitoring module.

16. (original): The HMI system as claimed in claim 15, wherein the managing device is configured to cyclically manage the HMI data of the technical installation.

17. (original): The HMI system as claimed in claim 15, wherein the HMI data module is integrated into the technical installation.

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

18. (original): The HMI system as claimed in claim 15, further comprising a data bus configured to couple the HMI data module to the technical installation.

19. (original): The HMI system as claimed in claim 15, wherein the loading device is configured to transmit the HMI data in contactless manner to the assigned universal mobile control and monitoring module.

20. (original): The HMI system as claimed in claim 15, wherein the HMI data module further comprises a receiver configured to receive at least transmission messages from the assigned universal mobile control and monitoring module, and wherein the transmission messages comprise at least HMI input data for updating the HMI data of the technical installation.

21. (original): The HMI system as claimed in claim 15, wherein the universal mobile control and monitoring module comprises a position determination device configured to analyze positioning signals that are provided by a satellite system, and configured to transmit the current position of the universal mobile control and monitoring module to the managing-and-assigning device of the HMI data module.

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

22. (original): The HMI system as claimed in claim 21, wherein the satellite system comprises a GPS satellite system.

23. (original): The HMI system as claimed in claim 15, wherein the universal mobile control and monitoring module comprises a position determination device configured to analyze short-range fields, which are received in the regional control sub-area as positioning signals, and configured to transmit the current position of the universal mobile control and monitoring module to the managing-and-assigning device of the HMI data module.

24. (original): The HMI system as claimed in claim 23, wherein the short-range fields are based on at least one of a Bluetooth standard and an Infrared standard.

25-36. (canceled).

37. (new): The method as claimed in claim 1, wherein the universal mobile control and monitoring module is assigned to the technical installation only if the current position of the universal mobile control and monitoring module is within the regional sub-control area of the technical installation.

38. (new): The method as claimed in claim 37, wherein, when the current position of the universal mobile control and monitoring module is outside the regional sub-control area of the

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

technical installation, the universal mobile control and monitoring module is not assigned to the technical installation.

39. (new): The system as claimed in claim 15, wherein the managing-and-assigning device assigns the universal mobile control and monitoring module to the technical installation only if the current position of the universal mobile control and monitoring module is within the regional sub-control area of the technical installation.

40. (new): The system as claimed in claim 39, wherein, when the current position of the universal mobile control and monitoring module is outside the regional sub-control area of the technical installation, the managing-and-assigning device does not assign the universal mobile control and monitoring module to the technical installation.

41. (new): The method as claimed in claim 1, wherein said assigning comprises linking the universal mobile control and monitoring module to the technical installation and storing the linking information in a management control unit of the technical installation.

42. (new): The HMI system as claimed in claim 23, wherein the short-range fields are based on a wireless short range communication standard.

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

43. (new): The HMI system as claimed in claim 42, wherein the short-range wireless communication standard is up to approximately ten meters.

44. (new): The HMI system as claimed in claim 42, wherein the short-range wireless communication standard is up to approximately hundred meters.

45. (new): The method as claimed in claim 1, wherein the technical installation is remote from the universal mobile control and monitoring module and wherein the HMI data of the technical installation is output to the universal mobile control and monitoring module.

46. (new): The method as claimed in claim 1, wherein the technical installation is remote from the universal mobile control and monitoring module and wherein the HMI data of the technical installation is stored in the universal mobile control and monitoring module.

47. (new): The method as claimed in claim 1, wherein the HMI data of the technical installation sets up a display of the universal mobile control and monitoring module.

48. (new): The method as claimed in claim 1, wherein the controlling of the technical installation comprises: the universal mobile control and monitoring module transmitting to the technical installation values input into the assigned universal mobile control and monitoring

AMENDMENT UNDER 37 C.F.R. § 1.111  
U.S. Appln. No. 10/652,024  
Attorney Docket No.: Q76821

module, and the technical installation using the transmitted values to change operating state of the technical installation.

49. (new): The method as claimed in claim 1, wherein the technical installation determines type of the HMI data to transmit to the assigned universal mobile control and monitoring module based on location of the assigned universal mobile control and monitoring module.

50. (new): The method as claimed in claim 49, wherein the technical installation transmits different types of the HMI data to the assigned universal mobile control and monitoring module based on whether the technical installation is visible from a location of the assigned universal mobile control and monitoring module.
